

Font installation – settings in Word

To ensure that the fonts work correctly when using Word, open a blank document and select the Kinetic Letters font from the available fonts shown in the font dialogue box on the “Home” tab page.

Choose the size you want; usually you will want something around 20pt. or larger.

If you have problems with the **display** (eg the Joined font does not display as joined), open a blank Word document, click on the arrow in the bottom right corner of the Font section of the Ribbon to access the font options.

Click the Advanced tab and make sure that there is a tick in the box on the left of “Kerning for fonts” (select 8pt), that the “Ligatures” option has “All” selected and that there is a tick in the box on the left of “Use Contextual Alternates”. Then click the “Set as Default” option and select “All documents based on Normal template” and click the OK boxes.
